**SpO₂**
(Optional Oximeter Connection)

---

**Installing the Modem**

In order for the modem to work properly, it must be installed in a therapy device.

1. Ensure the therapy device is turned off.
2. Open the accessory door on the therapy device.
3. Slide the modem into the accessory slot until it clicks into place.

---

**Making a Call**

Normally, the modem will automatically make a call and upload therapy data at predetermined times set by your provider. The modem will not make a call while the blower is on and therapy device is delivering therapy.

If instructed to do so by your provider, you can manually make a call by navigating to the My Provider menu on the therapy device and selecting “Upload.” The device will then display the animated Sending screen, then display that the upload was completed.

**Modem On/Off**

If necessary, you may turn the modem off temporarily by navigating to the My Setup menu and selecting “Modem Off.” The modem will not be able to make any calls while off, and an airplane icon will appear on the upload screen. When you are ready to turn the modem back on, navigate to the My Setup menu and select “Modem On.”
