

ResTraxx™ Online

Achieving long-term compliance for sleep apnea patients requires timely access to patient data.

ResTraxx™ Online provides timely access to compliance and efficacy details when you need it, simplifying patient care and maximizing your business efficiencies.

Through ResTraxx Online, physicians and homecare providers can view patient therapy details to identify and proactively address issues early on, helping their patients stay compliant with therapy.

ResTraxx Online system features

- **S9™ Wireless Module**

The module attaches to the S9 device and transmits compliance data every day to ResTraxx Online, eliminating the need for data cards and frequent patient visits.

- **ResTraxxOnline.com**

Log on to this web-based facility to get convenient access to up-to-date patient information. The simple color-coded display helps you identify exception patients quickly and easily.

S9 wireless module

Transmits daily compliance data to ResTraxx Online

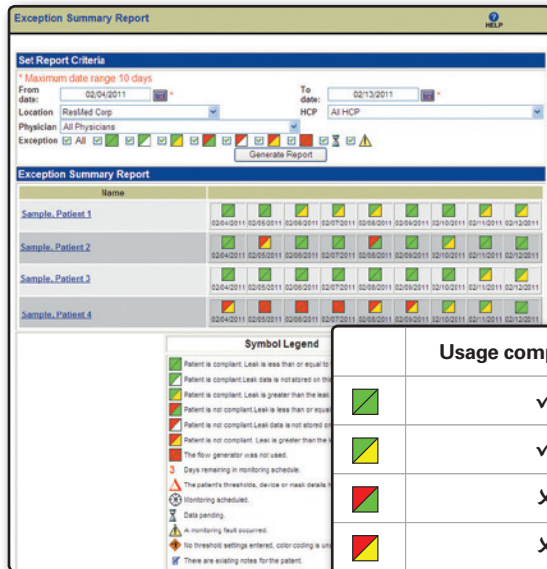

ResTraxxOnline.com

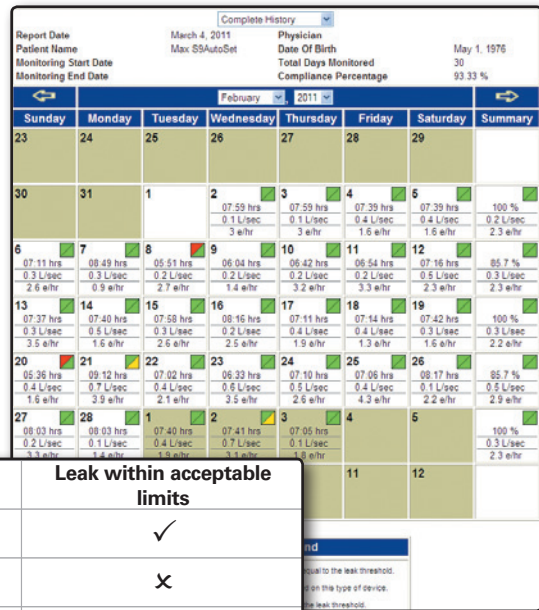

Provides timely access to the most up-to-date patient data

Usage History Report

	Usage compliance met	Leak within acceptable limits
	✓	✓
	✓	✗
	✗	✓
	✗	✗
	Device not used	

Color-coding for easy identification

Improve compliance with early intervention

- Check your patients at a glance with the Exception Summary Report. View a simple summary of the last 10 days for actively monitored patients.
- Visual color-coding allows you to easily identify patients that require your attention.
- Zoom in for compliance and efficacy data when needed. View monthly trends in usage, efficacy and leak data.

Improve business efficiency

- Physician partners can access the same patient data and add notes for efficient communication with homecare providers.
- Remote settings changes are available to fine-tune therapy and streamline patient management.
- Business reporting adds value to your referral business by providing proof of higher patient compliance due to improved patient care.

Timely data access

S9 wireless modules are programmed with a monitoring schedule to transmit data automatically. Historical data can be requested at any time to retrieve data that was not transmitted via the monitoring schedule, reducing the need for card downloads.
